GOVERNMENT PRINTING OFFICE

LETTER OF TRANSMITTAL

BOARD OF TRUSTEES OF THE FEDERAL
OLD-AGE AND SURVIVORS INSURANCE TRUST FUND,
Washington, D. C., March 1, 1951.

The PRESIDENT OF THE SENATE,
The SPEAKER OF THE HOUSE OF REPRESENTATIVES,
Washington, D. C.

SIRS: We have the honor to transmit to you the Eleventh Annual Report of the Board of Trustees of the Federal Old-Age and Survivors Insurance Trust Fund, in compliance with the provisions of section 201 (b) of the Social Security Act, as amended.

Respectfully,

JOHN W. SNYDER,
*Secretary of the Treasury,
and Managing Trustee of the Trust Fund.*
MAURICE J. TOBIN,
Secretary of Labor.
OSCAR R. EWING,
Federal Security Administrator.

ELEVENTH ANNUAL REPORT OF THE BOARD OF TRUSTEES OF THE FEDERAL OLD-AGE AND SURVIVORS INSURANCE TRUST FUND

INTRODUCTORY STATEMENT

The Federal old-age and survivors insurance trust fund was established on January 1, 1940, under the provisions of section 201 of the Social Security Act, as amended. The fund is held by the Board of Trustees comprised of three ex officio members: the Secretary of the Treasury, who is also the managing trustee; the Secretary of Labor; and the Federal Security Administrator. Under the Social Security Act Amendments of 1950 the Commissioner for Social Security serves as secretary of the Board of Trustees. This report is submitted jointly by the three trustees.

As required by law, the report describes the operations of the trust fund during the fiscal year ended June 30, 1950, the expected receipts and disbursements during the five fiscal years following that date, and the long-range actuarial status of the fund. It also discusses the far-reaching effects of the 1950 amendments on the future operations of the trust fund.

Because the 1950 amendments were enacted after the close of the fiscal year reviewed in this report, the operations of the trust fund during the year reflect revenues and outlays for the contribution, coverage, and benefit structure of the program as provided by the Social Security Act before these amendments. As provided by amendments enacted in 1947, however, the contribution rates for employers and employees rose from 1.0 percent to 1.5 percent each on January 1, 1950—in the middle of the fiscal year under review. For this reason, and also because of a change to a method of collecting contributions on a more current basis, receipts for the last half of the fiscal year were almost 50 percent higher than those for the first half.

Although employment and earnings in fiscal year 1950 showed only slight changes from the 1949 levels on an over-all yearly basis, the economic trends ran opposite in the two fiscal years. Fiscal year 1949 started at the highest level of economic activity in the country's peacetime history, but both employment and payrolls dropped during the year. On the other hand, employment and earnings rose during fiscal 1950, and by June 1950 the economy was operating at peak levels. For the years as a whole, total civilian employment in fiscal year 1950 averaged 59.0 million, or only slightly below the all-time peak of 59.2 million reached in 1949. Average civilian employment in the last 6 months of fiscal year 1950 was slightly higher than the corresponding average for fiscal year 1949, and average nonagricultural employment for the 12 months of fiscal 1950 was about one-half

of 1 percent higher than in 1949. Unemployment, which averaged 2.6 million in 1949, averaged 3.7 million in fiscal year 1950 but the number unemployed was decreasing fairly rapidly toward the end of the year.

Payrolls in civilian employment totaled \$131.5 billion in fiscal year 1950, about \$0.6 billion below the previous all-time peak reached in 1949. In the second half of fiscal 1950, civilian payrolls were higher than in the corresponding 6 months of the preceding year by about \$1.6 billion. The total of wages taxable under old-age and survivors insurance, amounting to \$83.8 billion in fiscal year 1950, was less than 1 percent below the all-time high reached in fiscal year 1949. The number of workers receiving wage credits under old-age and survivors insurance averaged close to 38 million per quarter in 1950, a decrease of about 2 percent from fiscal year 1949.

These economic conditions directly affected both the receipts and disbursements of the trust fund in fiscal year 1950. Nevertheless, appropriations to the trust fund increased to an all-time high of \$2.1 billion, or 25 percent above 1949, as a result of the higher contribution rate that became effective on January 1, 1950, and a change to a method of collecting contributions on a more current basis. Benefit payments rose at a somewhat slower rate than revenues—by about one-fifth—to a total of \$727,266,000. The total number of monthly beneficiaries in June 1950 was 2,930,000, or 15 percent more than in June 1949. Retirement beneficiaries (including entitled wives and children of primary beneficiaries) numbered 1,839,000 in June 1950, or 17 percent more than 1 year earlier. There were 1,091,000 survivor beneficiaries in June 1950, or 11 percent more than in June 1949. During the fiscal year the trust fund received interest of \$256,778,000, and increased its assets to a total of \$12,892,612,000.

Hostilities in Korea began so late in the fiscal year under review that their economic consequences were not yet reflected in trust fund operations. These military activities and the defense preparations, however, will have far-reaching effects on the operations of the trust fund, both short-range and long-range. These effects resulting, for example, from higher money earnings in covered employment, increased employment of women, and the deferred retirement of older workers, cannot be fully appraised at this time, but as far as possible they are taken into account in this report. The report also takes full cognizance of the important changes in coverage, eligibility, and benefit amounts resulting from the enactment of the 1950 amendments, as well as the new contribution schedule under these amendments and the special provisions for veterans.

It is difficult to foresee economic developments over the next 5 years, and therefore the assumptions on which the Board has based its estimates of the expected operations of the trust fund during this period are subject to many uncertainties. In many respects developments over the much longer period covered by the discussion of the actuarial status of the trust fund are even more uncertain. The detailed report that follows, therefore, should be read with full recognition of the difficulties of estimating future trust fund income and disbursements under constantly shifting economic conditions.

SOCIAL SECURITY ACT AMENDMENTS OF 1950

The 1950 amendments to the Social Security Act (Public Law 734, 81st Cong.), which represented the first major legislative changes in the old-age and survivors insurance program since enactment of the 1939 amendments, became law shortly after the close of the fiscal year ending June 30, 1950. These changes in the law will have far-reaching effects on the level and incidence of income and disbursements of the trust fund both in the immediate and long-term future. Coverage was extended to a number of classes of employees as well as to most nonagricultural self-employed persons hitherto excluded. The requirements necessary to qualify for receipt of benefits were relaxed greatly. Benefit amounts payable to present and future beneficiaries were increased substantially. The schedule of contribution rates was revised to yield larger amounts of future contribution income with a view not only to meeting the higher benefit outlays of the liberalized program but also to making the system self-supporting.

The more important changes significant from an actuarial standpoint will now be presented in greater detail.

1. Coverage was extended compulsorily to nearly 8 million additional persons, including regularly employed domestic and farm workers; Federal employees not covered under the civil-service retirement program; the nonfarm self-employed other than doctors, lawyers, engineers, and members of certain other professional groups; workers and the self-employed in Puerto Rico and the Virgin Islands; and a few other small occupational classes. In addition, two categories of wage earners were given the opportunity to be covered on a voluntary basis—employees of nonprofit institutions and employees of State and local governments who are not under retirement systems. Assuming that virtually all employees eligible for coverage on a voluntary basis elect such coverage, about 75 percent of the gainfully employed in this country will be covered by the old-age and survivors insurance program. Table 1 presents estimates of the number of persons in the newly covered groups.

TABLE 1.—Estimated coverage under the 1950 amendments

Category	Number covered ¹
Total covered.....	44, 800, 000
Former coverage.....	35, 000, 000
Increase under compulsory coverage.....	7, 750, 000
Nonfarm self-employed.....	4, 700, 000
Agricultural workers:	
Borderline employment.....	200, 000
Regularly employed on farms.....	650, 000
Domestic workers.....	1, 000, 000
Federal civilian employees not under retirement system.....	250, 000
Employees outside the United States.....	150, 000
Employment in Puerto Rico and Virgin Islands.....	400, 000
New definition of "employee".....	400, 000
Increase under voluntary coverage.....	2, 050, 000
Employees of nonprofit organizations.....	600, 000
Employees of State and local governments.....	2 1, 450, 000

¹ Represents average number of persons covered during a week.

² Excludes a relatively small number of transit workers who are compulsorily covered.

2. Benefits will henceforth be paid in circumstances in which no benefits would formerly have been paid.

(a) The requirements for fully insured status were liberalized by introducing a new starting date for determining such status. This "new start" enables many persons at least 65 years of age who did not meet the former requirements to become immediately eligible to receive retirement benefits. It also removes the disadvantage the newly covered groups would otherwise have faced in acquiring eligibility.

(b) Provisions defining dependency were modified to permit the payment of benefits to all unmarried children under 18 years of age whose mothers were currently insured at time of death.

(c) Several new benefits for dependents and survivors of insured persons were added. Benefits equal to 50 percent of the primary insurance amount are payable to a wife, under 65 years of age, of an old-age (primary) beneficiary as long as she has in her care a child entitled to benefits on her husband's earnings. In certain instances benefits are payable to the dependent husband, aged 65 or over, of a retired female beneficiary, and also to the aged surviving dependent widower of a deceased woman worker. Husband's and widower's benefits are equal to 50 and 75 percent, respectively, of the primary insurance amount.

(d) The provisions governing the withholding of benefits because of work in covered employment were liberalized. Eligible persons at least 75 years of age can receive benefits regardless of the amount of their earnings in covered employment. Those under 75 years of age may earn as much as \$50 a month in covered employment and still receive benefits.

(e) Lump-sum death benefits will be paid even though monthly benefits would be payable to survivors for the month in which the wage earner died.

(f) Monthly benefits will be paid retroactively for a period up to 6 months prior to the month in which an application was filed provided the beneficiary was eligible therefor.

3. Larger benefits will be paid to future beneficiaries as well as to persons on the rolls.

(a) The maximum amount of annual taxable earnings was raised to \$3,600.

(b) For persons having at least 6 quarters of coverage after 1950, the average monthly wage may be calculated over all years after 1936 or after 1950, whichever yields the larger primary insurance amount, except that in the case of individuals born after 1928, the 1950 starting date must be used.

(c) For persons whose average monthly wage is calculated on the basis of wages and self-employment income after 1950, the monthly primary insurance amount will be 50 percent of the first \$100 of average monthly wage, plus 15 percent of the next \$200. The minimum primary insurance amount ranges from \$25 for persons with average monthly wages between \$35 and \$50, down to \$20 for persons with average monthly wages below \$31.

(d) For persons already on the beneficiary rolls, benefits were increased by means of a conversion table contained in the new amendments. This table increased primary insurance benefits by 77½ percent, on the average, with a range of 100 percent for the smallest benefit to 50 percent for the largest benefit. Where the wage earner lacks 6 quarters of coverage after 1950, benefits to future beneficiaries will be based on an average monthly wage computed over all years after 1936. In all cases where the average monthly wage is computed over all years after 1936, including cases referred to in subparagraph (b) above, the old benefit formula will be used, except that no 1 percent increment will be included for years after 1950. The amounts so computed are then increased by means of the conversion table.

(e) Parent's benefits were increased to 75 percent of the primary insurance amount. Child-survivor benefits were increased to the sum of (1) 50 percent of the primary insurance amount, and (2) 25 percent of the primary insurance amount, divided equally among all child beneficiaries in the family. The amount of the lump-sum death payment was changed to three times the primary insurance amount.

(f) The maximum monthly amount of family benefits payable with respect to one wage record is the smaller of \$150 or 80 percent of the average monthly wage, provided that the latter limit may not reduce benefits below \$40.

4. Wage credits of \$160 a month are given to persons for each month of service in World War II, unless benefits (other than ordinary veteran's benefits) based on such service are payable by another Federal retirement system. No provision is made to reimburse the trust fund from the general funds of the Treasury for the additional costs arising from such wage credits. Accordingly these additional costs will be borne by the trust fund.

The survivorship protection provided to certain World War II veterans by the Social Security Act Amendments of 1946 has been continued by the present amendments. However, the additional costs of these benefits which formerly were met from general funds will, effective September 1, 1950, be borne by the trust fund.

5. Contribution rates for employees and employers will be 1½ percent each on taxable wages for calendar years 1951-53; 2 percent each for calendar years 1954-59; 2½ percent each for calendar years 1960-64; 3 percent each for calendar years 1965-69; and 3¼ percent each thereafter. The contribution rates on self-employment income are equal to one and one-half times the corresponding employee rates.

The provision which was added to the Social Security Act in 1943 authorizing appropriations to the trust fund from general revenues was eliminated.

Table 2 presents, on a level premium basis, an estimate of the increases in cost, expressed as a percent of payroll, arising from the major changes in the program.

6 FEDERAL OLD-AGE AND SURVIVORS INSURANCE TRUST FUND

TABLE 2.—Estimated level-premium costs as percent of payroll by specified change in law¹

Item	Level-premium cost (percent)
Cost of benefits under old law.....	4.50
Effect of changes:

Source: Actuarial Cost Estimates for the Old-Age and Survivors Insurance System as Modified by the Social Security Act Amendments of 1950, prepared for the use of the Committee on Ways and Means by Robert J. Myers, actuary to the committee, dated July 27, 1950.

¹ Figures relate only to benefit payments after 1950 and represent an intermediate estimate that is subject to a significant range because of the possible variation in the cost factors involved in the future. Computations are based on a compound interest rate of 2 percent per annum. The order in which these various changes are considered in this table affects the amount of the increase in cost to be attributed to a specific element.

² Includes effect of minimum and maximum benefit provisions.

³ Includes higher rate for the first survivor child and for parents, more liberal eligibility conditions for determining child dependency on married women workers, wife's benefits for wives under age 65 with children, and husband's and widower's benefits.

NATURE OF THE TRUST FUND

Amounts accumulated under the old-age and survivors insurance program are held in the Federal old-age and survivors insurance trust fund, and financial operations under the program are handled through this fund. The primary source of the fund's receipts is amounts appropriated to or deposited in it under permanent appropriation on the basis of contributions paid by workers and their employers, and by individuals with self-employment income, in employments covered by the old-age and survivors insurance program. All employees and their employers in employments covered by the Federal Insurance Contributions Act or under State agreements made pursuant to section 218 of the Social Security Act, as amended, are required to pay contributions with respect to the wages of individual workers. All individuals with self-employment income covered by subchapter E of chapter 1 of the Internal Revenue Code are required to pay contributions with respect to their self-employment income. Wages or self-employment income, or their combined sum, in excess of \$3,600 in any one year are disregarded in computing the amount of an individual's contributions.

Except for amounts received by the Secretary of the Treasury under State agreements, all contributions are collected by the Bureau of Internal Revenue and are paid into the Treasury as internal-revenue collections. Sums equivalent to 100 percent of the contributions paid to or deposited into the Treasury are transferred to the trust fund from time to time on the basis of estimates made by the Secretary of the Treasury. Proper adjustments are made periodically

to the extent that the estimates are subsequently found to differ from the actual amounts of contributions payable.

Although the Social Security Act of 1935 fixed the contribution rates for employees and their employers at 1 percent each on taxable wages for the calendar years 1937-39 and provided for higher rates thereafter, subsequent acts of Congress extended the 1-percent rates through calendar year 1949. On January 1, 1950, the rates rose to 1½ percent each for employees and employers, in accordance with the provisions of the Social Security Act Amendments of 1947. The Social Security Act Amendments of 1950 provide that these 1½-percent rates shall remain in effect through calendar year 1953, and that the rates shall rise to 2 percent each on January 1, 1954, to 2½ percent each on January 1, 1960, to 3 percent each on January 1, 1965, and to 3¼ percent each on January 1, 1970. Beginning January 1, 1951—the effective date of extension of coverage to self-employed persons—the rates of tax on self-employment income are equal to one and one-half times the corresponding employee rates.

The second source from which receipts of the trust fund are derived is interest received on investments held by the fund. The investment procedures of the fund are described later in this section.

The Social Security Act Amendments of 1946 added section 210 to the Social Security Act. This section provided survivorship protection to certain World War II veterans for a period of 3 years following their discharge from the Armed Forces. Section 210 (d) authorized Federal appropriations to reimburse the Federal old-age and survivors insurance trust fund for such sums as were withdrawn to meet the additional cost (including administrative expenses) of the payments to survivors of World War II veterans under this section. Under the Social Security Act Amendments of 1950 this survivorship protection was continued, but the resulting additional cost was to be met from the trust fund beginning September 1, 1950.

Public Law 642, enacted June 14, 1948, which amended the definition of the term "employee" as used in the Social Security Act, resulted in the exclusion from coverage of certain services previously held covered under title II of the act. While the amended definition was made retroactive to August 14, 1935, certain wage credits established under the former definition will remain credited to the individual's account. The law authorizes an appropriation to the trust fund from general revenues equal to the estimated total amount of benefits paid and to be paid under title II of the Social Security Act that would not have been paid had the amended definition been in effect beginning August 14, 1935.

Expenditures for benefit payments and administrative expenses under the old-age and survivors insurance program are paid out of the trust fund. These expenditures for the fiscal year ended 1946 and previous years included such reimbursements to the Treasury for administrative expenses incurred under the program as were authorized by section 201 (f) of the act. Successive acts of Congress have modified the procedures in accounting for these expenses. Thus, during fiscal years 1947 and 1948 progressively increasing portions of the program's administrative expenses incurred by the Federal Security Agency were charged directly to the trust fund and not reimbursed from the fund as they had been in the preceding fiscal years. Beginning with fiscal year 1949, all expenses incurred by all offices of the Federal Security Agency in carrying out the provisions of title II of the Social

Security Act, as amended, are charged directly to the trust fund. Under the President's Reorganization Plan No. 2, effective July 16, 1946, the Federal Security Administrator certifies benefit payments to the managing trustee, who makes the payments from the trust fund in accordance therewith. Prior to July 16, 1946, certifications for payments were made by the Social Security Board. Payments are made from an uninvested balance held in the fund to the account of the disbursing officer of the Treasury.

With respect to wages paid prior to 1951, refunds to employees who worked for more than one employer during the course of a year and paid contributions on such wages in excess of the statutory maximum, were made from general revenues. With respect to wages paid after December 31, 1950, these refunds will be paid from the Treasury account for refunding internal revenue collections. The Social Security Act Amendments of 1950 direct the managing trustee to pay from time to time from the trust fund into the Treasury as repayments to the account for refunding internal revenue collections the amount estimated by him to be contributions which are subject to refund with respect to wages paid after December 31, 1950.

The managing trustee invests that portion of the trust fund which, in his judgment, is not required to meet current expenditures for benefits or administration. The Social Security Act restricts permissible investments of the trust fund to interest-bearing obligations of the United States Government or to obligations guaranteed as to both principal and interest by the United States. Regular obligations of these types may be acquired on original issue at par or by purchase of outstanding obligations at their market price. In addition, the Social Security Act authorizes the issuance of special obligations exclusively to the trust fund. Such special obligations are required to bear interest at a rate equal to the average rate of interest, computed as of the end of the calendar month next preceding the date of their issue, borne by all interest-bearing obligations of the United States forming a part of the public debt (where such average rate is not a multiple of one-eighth of 1 percent, the rate of interest on such special obligations is required to be the multiple of one-eighth of 1 percent next lower than such average rate).

Interest on regular obligations held by the trust fund is received by the fund at the time the interest becomes payable on the particular series held. Interest on special obligations is received semiannually on June 30 and December 31. Regular obligations acquired by the fund may be sold at any time by the managing trustee at their market price. Special obligations may be redeemed at par plus accrued interest. Interest receipts and proceeds from the sale or redemption of obligations held in the trust fund are available for investment in the same manner as other receipts of the fund.

Interest earned by the invested assets of the trust fund will provide income to meet a portion of the benefit disbursements, which are expected to increase markedly over a long period. Such a substantial increase is anticipated both because the number of persons aged 65 and over will be increasing for many decades, and because an increasing proportion of such aged persons will be qualifying for benefits under the old-age and survivors insurance system.

On June 30, 1950, there were about 12,400,000 persons aged 65 and over, a number equivalent to 8 percent of the total population. It is estimated that by the end of 50 years the number of persons

aged 65 and over may be 1½ to 2¼ times as large as on June 30, 1950, and represent from 10 to 16 percent of the population. The effect on the finances of the old-age and survivors insurance system of this expected change in the number of aged persons will be even greater than may at first appear because, compared with the present situation, a much larger proportion of aged persons 50 years hence is expected to be eligible to receive benefits under the program. The future financial soundness of this system, with its rising rate of disbursements, is of the utmost importance to the millions of persons who are already within its scope and to the Nation as a whole.

The trust fund, furthermore, serves in part as a reserve against short-run fluctuations in total contribution and benefit amounts, providing a margin of safety against relatively short-term contingencies to insure the payment of benefits without sharp changes in rates paid by contributors. These reserves will provide additional resources against a sudden increase in total benefit amounts or a sharp decline in contributions, both of which could occur simultaneously during any reversal in business activity.

SUMMARY OF OPERATIONS OF TRUST FUND, FISCAL YEAR 1950

A statement of the income and disbursements of the Federal old-age and survivors insurance trust fund in the fiscal year which began on July 1, 1949, and ended on June 30, 1950, and of the assets of the fund at the beginning and end of the fiscal year, is presented in table 3.

TABLE 3.—Statement of operations of the Federal old-age and survivors insurance trust fund during the fiscal year 1950¹

Total assets of the trust fund, June 30, 1949.....		\$11,309,949,287.58
Receipts, fiscal year 1950:

Transfers from general fund.....	3,604,000.00	
Interest and profits on investments.....	256,778,439.42	
Total receipts.....	<u>2,366,770,244.92</u>	
Disbursements, fiscal year 1950:		
Benefit payments.....	727,206,479.24	
Administrative expenses.....	56,841,237.61	
Total disbursements.....	<u>784,107,716.85</u>	
Net addition to trust fund.....		1,582,662,528.07
Total assets of the trust fund, June 30, 1950.....		12,892,611,815.65

¹ On the basis of the Daily Statement of the U. S. Treasury.

The total receipts of the trust fund during the fiscal year 1950 amounted to \$2,366.8 million. Of this total, \$2,106.4 million represented the sum of the amounts equal to contributions received under the Federal Insurance Contributions Act and covered into the Treasury, which were appropriated to the trust fund during the year under the continuing appropriation in section 201 (a) of the Social Security Act, as amended. The total amount appropriated represented a 25-percent increase over appropriations in the preceding fiscal year. This large increase resulted from the combined influence of collecting a substantial proportion of contributions monthly rather than quarterly (a method instituted in January 1950) and the increase in the contribution rate. The additional \$260.4 million of receipts consisted of \$256.8 million of interest and profits on investments of the fund and \$3.6 million transferred from general funds of the Treasury in accordance with section 210 (d) of the Social Security Act, as

10 FEDERAL OLD-AGE AND SURVIVORS INSURANCE TRUST FUND

amended in 1946 and in effect prior to the enactment of the Social Security Act Amendments of 1950.

Disbursements from the trust fund during the fiscal year 1950 totaled \$784.1 million, of which \$727.3 million consisted of benefit payments, and \$56.8 million for administrative expenses of the insurance program. The total amount of benefits paid during the fiscal year exceeded benefits paid in the fiscal year 1949 by 20 percent, the increase reflecting primarily the larger number of persons drawing benefits. A summary of receipts and disbursements of the old-age and survivors insurance trust fund during each of the 10 years from July 1, 1940, through June 30, 1950, is presented in table 4.

The ratio of administrative expenditures of the fund to contributions collected and benefits paid is shown in table 5.

- ¹ January-June 1940, fund having been established in place of old-age reserve account on Jan. 1, 1940.
- ² Represents assets transferred from old-age reserve account on Jan. 1, 1940; appropriations equivalent to contributions collected became effective July 1, 1940; appropriations authorized under sec. 201 (a) of the Social Security Act of 1935 were made prior to Jan. 1, 1940.
- ³ To meet the additional costs of benefits to survivors of certain World War II veterans as defined in title II of the Social Security Act Amendments of 1946.
- ⁴ Less than \$0.5 million.
- ⁵ Includes profits on marketable investments amounting to \$138,668 in fiscal year 1949, and \$8,934 in fiscal year 1950.
- ⁶ Totals do not necessarily represent the sum of rounded components.
- ⁷ Includes some reimbursements applicable to outlays in other fiscal years.
- ⁸ Adjusted for overreimbursements in prior years.

TABLE 5.—Relationship of administrative charges against old-age and survivors insurance trust fund to old-age and survivors insurance contributions and benefit payments

Fiscal year	Administrative charges against the OASI trust fund as a percentage of—		Fiscal year	Administrative charges against the OASI trust fund as a percentage of—	
	OASI contributions collected	Benefit payments		OASI contributions collected	Benefit payments
1941	3.9	41.7	1946	3.0	11.7
1942	3.0	24.3	1947	2.8	9.6
1943	2.4	18.4	1948	2.9	9.3
1944	2.5	17.7	1949	3.2	8.8
1945	2.1	11.2	1950	2.7	7.8

The distribution of benefit payments in fiscal years 1949 and 1950 by type of benefit is shown in table 6. Approximately 75 percent of the total benefit payments from the fund in the fiscal year 1950 were accounted for by monthly benefits to persons aged 65 or over—retired wage earners and their wives, and aged widows and parents of deceased wage earners. Approximately 20 percent of the 1950 benefit payments represented monthly benefits on behalf of children of deceased or retired workers and payments to widows—practically all of them under age 65—who had children of deceased wage earners in their care. The balance of the benefits paid in the fiscal year 1950 consisted almost entirely of lump-sum amounts in cases where no survivor of an insured wage earner dying after 1939 was immediately entitled to monthly benefits.

The total of \$727.3 million paid in benefits during fiscal year 1950 includes \$2.8 million for additional monthly benefits and \$0.2 million for additional lump sums paid under section 210 to survivors of certain deceased World War II veterans. Under the provisions of the Social Security Act Amendments of 1946, the trust fund will be reimbursed for these payments to the survivors of veterans.

At the end of the fiscal year 1950, approximately 2.9 million persons in 2.1 million families were receiving monthly benefits at an annual rate of \$728 million. At the end of the preceding fiscal year, the monthly benefit rolls included 2.6 million persons in about 1.8 million families to whom monthly benefits were being paid at an annual rate of \$618 million. The average monthly benefit in current payment status for different types of family groups as of June 30, 1950, was as follows: Retired male worker only, \$26.80; retired worker and wife, \$41.90; retired female worker only, \$20.80; widow (aged 65 and over) only, \$20.90; widowed mother and one child, \$36.70; widowed mother and two children, \$50.70; and widowed mother and three or more children, \$54.50.

TABLE 6.—*Estimated distribution of Treasury disbursements for benefit payments under the old-age and survivors insurance program, by type of benefit, fiscal year 1949 and 1950*

[In millions]

Type of benefit	1949		1950	
	Amount	Percent of total	Amount	Percent of total

Widow's current (widows of wage earners with child beneficiary).....	37.8	6	40.4	6
Lump-sum benefits (no survivor of deceased wage earner immediately entitled to monthly benefits or wage earner died before 1940).....	32.2	5	34.0	5

¹ Includes additional benefits of \$3.6 million for fiscal year 1949 and \$3 million for fiscal year 1950 paid under sec. 210 to survivors of certain deceased World War II veterans. Amount is reimbursable to trust fund from the general fund of the Treasury.

² Total does not represent the sum of rounded component.

³ Less than 0.5 percent.

12 FEDERAL OLD-AGE AND SURVIVORS INSURANCE TRUST FUND

The total assets of the old-age and survivors insurance trust fund amounted to \$11,310 million on June 30, 1949. These assets increased to \$12,893 million by the end of the fiscal year 1950, as the result of an excess of receipts over disbursements amounting to \$1,583 million during the fiscal year. Table 7 shows a comparison of the total assets of the trust fund and their distribution at the end of the fiscal years 1949 and 1950. The assets of the fund at the end of the fiscal year 1950 consisted of \$12,645 million in the form of obligations of the United States Government, \$168 million to the credit of the fund account, and \$80 million to the credit of the disbursing officer.

The Government obligations held in the trust fund consist of special certificates issued directly to the fund and marketable bonds. The asset value of the special certificates is their par value. The asset value of the marketable bonds, as carried on the books of the Treasury Department prior to December 1949, was the principal cost—gross purchase price less amount paid for accrued interest—at the time of acquisition. Beginning with December 1949, the asset value of these marketable bonds, as carried on the books of the Treasury Department, is the book value—par value plus unamortized premium outstanding.

¹ On basis of Daily Statement of the United States Treasury.

² Gross purchase price less amount paid for accrued interest.

³ Par value plus unamortized premium outstanding.

⁴ Includes \$6,756.42 accrued interest paid on investments.

In accordance with the provisions of section 201 (c) of the Social Security Act, as amended, the managing trustee invested during fiscal year 1950 that portion of the assets of the trust fund which, in his judgment, was not required to meet current withdrawals. This section provides that direct obligations of the United States Government as well as obligations guaranteed as to both principal and interest by the

United States may be acquired through purchase of outstanding obligations in the open market or on original issue at par. Prior to fiscal year 1948, investments made for the fund consisted only of direct obligations of the United States purchased on original issue. During each of the fiscal years 1948-50, however, investments included purchases of outstanding obligations of the United States in the open market.

The par value of the net increase in the investments owned by the fund during the fiscal year 1950 amounted to \$1,415 million. New securities whose gross purchase price totaled \$11,816 million were acquired through the investment of receipts of the fund and the reinvestment of funds made available from the sale or maturity of securities during the year. Securities, consisting entirely of 2½ percent special certificates of indebtedness, were redeemed during the year at their par value of \$10,401 million. In addition, \$300,000 of Treasury bonds were sold in the open market, providing an additional source of income to the fund in the form of a profit amounting to \$8,933.54. This profit represents the difference between the proceeds received at time of sale, after deduction for accrued interest and investment expenses, and the book value at time of sale.

Of the new securities acquired, \$11,816 million were in the form of special certificates of indebtedness, \$1,398 million of which were redeemed during the year and \$10,418 million of which mature on June 30, 1951. These certificates were acquired at par and bear an interest rate of 2½ percent, this rate being determined by the average rate of interest on the interest-bearing public debt which prevailed at the end of the month preceding the date of issue of these securities. The remaining \$300,000 of securities acquired during the fiscal year were 2½ percent Treasury bonds purchased at a premium in the open market but yielding a higher rate of return than special securities issuable to the trust fund at the time such marketable issues were acquired.

The average rate of interest on the interest-bearing public debt, which determines the interest rate at which special obligations are issued to the old-age and survivors insurance trust fund, varies with changes in the composition of the public debt and with changes in the particular rates of interest on different classes of securities. During the fiscal year 1950 the average rate of interest on the public debt declined slightly. The rate was 2.200 percent on June 30, 1950, as compared with 2.236 percent on June 30, 1949. Because the rate exceeded 2½ percent but remained less than 2¾ percent during the entire fiscal year, the interest rate on all special issues acquired during the fiscal year continued to be 2½ percent.

STATEMENT OF THE EXPECTED OPERATIONS AND STATUS OF THE TRUST FUND DURING FISCAL YEARS 1951-55

The Board of Trustees is required under the provisions of section 201 (b) of the Social Security Act, as amended, to report each year to the Congress on the expected operations and status of the trust fund during the next ensuing five fiscal years. The Board is required to include in the report estimates of both the income and the disbursements of the trust fund in each of the 5 years.

The amount of the fund depends on the amount of taxable payrolls and self-employment income in covered industries, rates of contributions, and interest earnings of the fund. The disbursements from the fund depend on the number of persons among those eligible for benefits who apply for and receive benefits, the amounts of benefit to which they are entitled on the basis of past earnings, and the mortality rates among insured workers and beneficiaries. Consequently, both the income and the disbursements of the fund not only depend on the legislative provisions, which were amended in 1950 so as to increase substantially the number of beneficiaries and the level of benefits paid beginning in fiscal year 1951, but they are also affected by the general economic conditions.

In this as in previous reports the Board presents two sets of estimates of income and disbursements based on alternative assumptions. Alternative I shows the effect of assumptions postulating a relatively high level of economic activity; alternative II shows the effect of the assumption of a somewhat lower level of economic activity.

For both alternative I and alternative II, it is assumed that present statutory coverage of old-age and survivors insurance will remain unchanged throughout the period under consideration. The computations of tax income are based on present statutory rates of contribution which are 1½ percent each on employer and employee on wages paid during the calendar years 1950 through 1953 and 2 percent each during the calendar years 1954 and 1955; and 2¼ percent on the taxable income from self-employment in calendar years 1951, 1952, and 1953 and 3 percent in calendar years 1954 and 1955. The taxable earnings limit is \$3,000 for calendar year 1950 and \$3,600 for calendar year 1951 and thereafter.

The two sets of estimates of the income and disbursements of the trust fund for each of the five fiscal years 1951 to 1955, together with the resulting assets of the fund at the beginning and the end of each year, are presented in table 8. In addition, the figures on actual experience in fiscal years 1941 to 1950 are shown.

In alternative I it is assumed that employment and earnings will be maintained at a high level through calendar year 1955. Hourly wage rates, and therefore weekly earnings and average annual taxable wages, are assumed to increase not only in accordance with long-time trends but also because of the impetus of the defense program. The earnings of the self-employed are assumed to follow a similar pattern. Unemployment is assumed to remain at a low level. Benefit disbursements are assumed to increase substantially, primarily because of the long-range upward trend in the number of beneficiaries, and partly because of the alternative method of computing benefit amounts which becomes effective in calendar year 1952.

Under alternative I, aggregate income during the period of five fiscal years ending in 1955 would amount to \$25.2 billion, including \$23.3 billion in contributions and appropriations and \$1.9 billion in interest. Aggregate disbursements for the period would be about \$11.8 billion, with the highest expected annual disbursement about \$2.8 billion. The trust fund at the beginning of the fiscal year 1951 would amount to about 4.5 times the highest expected annual disbursement during the succeeding five fiscal years.

The other set of estimates, alternative II, is based on the assumption that after 1951 employment and wages will increase less rapidly than

under alternative I. It is assumed that unemployment will be slightly higher than under alternative I. As a result, estimated taxable payrolls and earnings of the self-employed in the periods affecting tax collections during fiscal years 1953-55 and therefore estimated contributions, are lower under alternative II than under alternative I. Estimated benefit disbursements, on the other hand, increase more rapidly under alternative II than under alternative I because a larger number of older workers withdraw from or are unable to find jobs in covered employment.

The aggregate income of the fund for the five fiscal years 1951-55 under alternative II would amount to \$23.3 billion, including \$21.5 billion in contributions and appropriations and \$1.9 billion in interest. Aggregate disbursements would be \$12.5 billion, with the highest expected annual disbursement about \$3.2 billion. The trust fund at the beginning of the fiscal year 1951 would amount to about 4.1 times the highest expected annual disbursement during the period.

The 1946 amendments to the Railroad Retirement Act, contained in Public Law 572, established a system of survivors insurance and, in effect, amended the survivors insurance system contained in title II of the Social Security Act. Under both systems, eligibility for and the amount of benefits payable to survivors, in general, are based on an insured worker's combined earnings record under the two programs. As a result of this coordination, some survivors are eligible under old-age and survivors insurance who otherwise would not be eligible; on the other hand, some survivors who would be eligible under old-age and survivors insurance instead receive railroad survivors benefits. In addition, some survivors who in any event would be eligible under old-age and survivors insurance receive larger benefits. Although no specific provision is contained in these amendments for the allocation of costs between the two systems, the legislation provided that, not later than January 1, 1950, a joint report should be made setting forth the actual experience under each system and recommending such legislation as deemed advisable for the equitable distribution, between the two systems, of the financial burdens arising from awarded claims.

This report, which has been submitted jointly by the Federal Security Agency and the Railroad Retirement Board to the Congress, sets forth the experience under each system for the period January 1, 1947 (the effective date of the survivor-benefit provisions of the 1946 amendments) through June 30, 1949, and contains the following recommendations:

We are not yet ready to recommend legislative changes providing for an equitable distribution of the financial burden between the railroad retirement account and the old-age and survivors insurance trust fund on a permanent basis; but, on the basis of the results thus far obtained, we recommend the enactment of legislation directing (a) that \$1,636,292 be transferred from the old-age and survivors insurance trust fund to the railroad retirement account, with interest from March 31, 1948, to the date of the transfer, and (b) that not later than March 31, 1952, a similar special joint report be made by our two agencies to the President to be submitted to Congress.

It is believed, however, that the net additional disbursements, if any, will not constitute a serious drain on the trust fund during the five fiscal years 1951-55, and no adjustments have been made in the estimates shown in table 8.

Public Law 642, enacted June 14, 1948, which amended the definition of the term "employee" as used in the Social Security Act, resulted in the exclusion from coverage of certain services previously held covered under title II of the act. While the amended definition was made retroactive to August 14, 1935, certain wage credits established under the former definition remained credited to the individual's account. The law authorized an appropriation to the trust fund from general revenues equal to the total amount of benefits paid and to be paid under title II of the Social Security Act, as estimated by the Federal Security Agency, that would not have been paid had the amended definition been in effect beginning August 14, 1935. An estimate was accordingly prepared and submitted to Congress based on the provisions of the Social Security Act in effect prior to enactment of the 1950 amendments. A revised estimate based on the new amendments has not yet been prepared and, accordingly, income from this source is excluded from the appropriations shown in table 8.

Included in the 1950 amendments to the Social Security Act are provisions which will have a substantial immediate effect on benefit payments. These provisions provide for (1) an increase in benefits averaging about 77½ percent to beneficiaries already on the rolls as well as increased benefits to all future beneficiaries; (2) more liberal insured status requirements which made about 675,000 persons, aged 65 or more, immediately eligible for benefits; and (3) the removal of the work clause entirely for persons at least 75 years of age, making it possible immediately for about 75,000 persons to receive benefits who otherwise would not have received them because they were working in covered employment. Consequently, benefit disbursements during the five fiscal years 1951-55 will be on a much higher level than the benefit disbursements previously made.

During the next 5 years, benefit disbursements, like contributions, will be dependent to a considerable extent upon economic developments and so will have a considerable range of possible variation. The number of workers in covered employment, their distribution among different classes of workers (e. g., older workers, very young workers, women, workers not previously engaged in covered employment, etc.), and the level of wages will all have a decided effect upon the amount of benefit payments to be anticipated.

In general, the larger the volume of employment the larger will be the number of workers who are insured under the program, and therefore the larger will be the number of deaths which will give rise to valid claims for survivors' benefits. However, over the short range the amount paid out for survivors' benefits will not be affected significantly by variations in economic conditions. While favorable opportunities for employment will operate to increase the number of insured persons, and hence increase the number of new death claims, such a high employment situation will tend to have counterbalancing effects such as that of inducing many of the widows and older children eligible for survivors' benefits to forego them by working in covered employment. On balance, the amount paid out for survivors' benefits over the next few years will differ so little whether the economic conditions of alternative I or alternative II are assumed that a single set of estimates is deemed appropriate for both alternatives (table 9).

On the other hand, the lower the level of employment during the next 5 years, the larger will be the volume of benefit payments to

retired workers who have attained age 65, and to their eligible dependents. As is indicated in table 10, a considerable proportion of the workers aged 65 and over who were eligible for old-age (primary) benefits in the past remained in covered employment (or, if they left covered employment, later returned to it) and did not receive benefits. Since fiscal year 1945, however, this proportion has decreased as the volume of withdrawals of older workers from covered employment has increased more rapidly than the growth in the number eligible for primary benefits. Should the high employment conditions assumed in alternative I materialize, this trend is expected to be not only halted but reversed; a situation similar to that which was observed during the high employment period of World War II. The proportion of eligible workers receiving benefits on January 1, 1951 (table 10), is comparatively low because, for a large number of workers newly eligible as a result of the liberalized insured status provisions of the 1950 amendments, claims for benefits had been received but had not yet been completely processed.

¹ In interpreting the estimates in this table, reference should be made to the accompanying text which describes the underlying assumptions. Estimates were prepared February 1951.

² Totals shown in this and other columns do not necessarily equal the sum of rounded components.

³ Include 100 percent of contributions which are automatically appropriated to the trust fund, adjusted for refunds, and reimbursements equivalent to any additional payments arising from the extension of survivors insurance protection to certain veterans of World War II (Social Security Act Amendments of 1946). Estimated contributions for fiscal years 1951-55 are based on statutory rates.

⁴ Represent charges against trust fund in respective fiscal years; administrative expenses, after adjustment for bookkeeping transfers, were about \$30,000,000 in fiscal year 1944 and about \$29,000,000 in fiscal year 1945.

Alternative II.....	3,084	1,873	311				

¹ In interpreting the estimates in this table, reference should be made to the accompanying text which describes the underlying assumptions. Estimates were prepared February 1951.

² Totals do not necessarily equal the sum of rounded components.

³ Effective Sept. 1, 1950, under the Social Security Act Amendments of 1950 (1) husband's and widower's insurance benefits became payable, and (2) the terms "primary insurance benefit" and "widow's current insurance benefit" were changed to "old-age insurance benefit" and "mother's insurance benefit," respectively.

⁴ Partly estimated.

If the lower employment conditions assumed in alternative II should materialize, it is expected that larger proportions of eligible workers will be obliged to leave covered employment especially at ages 65–69. Hence, despite a slightly smaller number of eligible workers, the number receiving old-age (primary) benefits under alternative II would considerably exceed that under alternative I. Moreover, it is expected that the average old-age (primary) benefit amount payable under alternative II would exceed the average under alternative I, inasmuch as many of the more steadily employed, and therefore higher-paid, older workers who would not withdraw from covered employment under the conditions of alternative I would not be employed under the conditions of alternative II. In consequence, alternative II would result in a substantially higher volume of benefit payments to old-age (primary) beneficiaries and their dependents.

Table 10 contains an analysis of workers eligible for old-age (primary) benefits by age attained as of the middle (January 1) of each of the fiscal years 1941 through 1955. The growth in the number of eligible workers aged 65–69 was gradual but uninterrupted during the years 1941–49, inclusive. This growth resulted partly from the increase in the population at these attained ages, but primarily from

the fact that each passing year a larger proportion of the persons attaining age 65 had fully insured status. In the calendar year 1940, a worker attaining age 65 would not have been fully insured if he had left covered employment more than 1½ or 2 years previous to his attainment of age 65—for example, due to a permanent disability—but in the calendar year 1949 numerous persons attaining age 65 were fully insured even though they left covered employment after reaching age 59.

TABLE 10.—Wage earners eligible for and receiving old-age (primary) benefits by attained age of wage earners, fiscal years 1941-55, subject to the assumptions and limitations stated in the text ¹

Middle of fiscal year (Jan. 1)	All wage earners aged 65 and over			Wage earners aged 65-69			Wage earners aged 70 and over

¹ In interpreting the estimates in this table reference should be made to the accompanying text which describes the underlying assumptions. Estimates were prepared February 1951.
² Figures for 1941-50 are partly estimated.

The marked increase in the number of workers eligible for benefits in 1951 is due to the liberalized insured-status provisions of the 1950 amendments to the Social Security Act. Prior to the passage of these amendments the number of quarters of coverage needed by persons aged 65 and over to be eligible for benefits decreased with advancing age. As a result of the 1950 amendments all persons now age 65 or over, or who will attain age 65 prior to July 1954, will be fully insured if they have the minimum number of six quarters of coverage. Consequently, the increase in the number of eligible persons on January 1, 1951, was greatest for the persons in the 65-69 age group. Although the same factors which contributed to the growth in the number of eligible persons before 1951 will continue to be operative after 1950, two new factors will have an even greater effect, namely,

the liberalized insured-status provisions and the extension of coverage to new areas of employment.

The estimates presented above result in a net increase in the trust fund during the 5-year period of about \$13.5 billion under alternative I and about \$10.8 billion under alternative II. It is entirely possible under alternative I that the amount of contribution income may be greater and benefit payments lower than has been estimated. The total result would be an even greater growth in the trust fund than is indicated under this alternative. On the other hand, lower contribution and interest income, together with higher benefit payments than shown under alternative II, would lead to smaller net increases in the trust fund.

ACTUARIAL STATUS OF THE TRUST FUND

Section 201 (b) of the Social Security Act requires the Board of Trustees to present each year a statement of the actuarial status of the trust fund. In the seventh annual report of the Board, new cost illustrations were presented taking into account the foreseeable effects of World War II and the brief postwar period to the date of that report. In the eighth to tenth reports no essential changes were made in these cost estimates other than to allow for the new contribution schedule introduced in the Social Security Act Amendments of 1947.

In view of the striking economic changes due to the war, many of which have been discussed in some length in previous reports, two sets of cost illustrations were prepared, one based on "high" economic assumptions (intended to represent close to full employment with average annual wages at about the level prevailing in 1944-46), and the other based on "low" economic assumptions (intended to represent, on the average, employment conditions similar to those prevailing in 1940-41, combined with the annual wage level prevailing in 1941-42). In view of the postwar level of wage and business activity and the established national policy of maintaining conditions conducive to full employment (as embodied in the Employment Act of 1946), it seemed probable that the actual future experience, on the average, would be closer to the high economic assumptions than to the low ones and very likely even above the high economic assumptions.

In 1949-50, the Congress conducted extensive consideration of social security legislation, resulting in the enactment of the Social Security Act Amendments of 1950 (Public Law 734, 81st Cong.), which was approved by the President on August 28, 1950. The various actuarial cost estimates which were made for this legislation were, in general, based on the same assumptions and methodology as the cost illustrations in the previous four reports of the Board, except that only the "high" economic assumptions were used for the reasons indicated in the previous paragraph and except that a slightly higher wage assumption was made. However, just as in the previous reports, the cost estimates were subdivided into a low cost example and a high cost example, which indicate the range present due to possible variations in such factors as mortality, fertility, retirement rates, and movement between covered and noncovered employment. Assumptions as to each of these factors were combined so as to yield cost illustrations which indicate both low and high costs possible under reason-
